EDUCATION

Marathwada Mitra Mandal's College of Engineering
B.Tech in Artificial Intelligence and Data Science (3rd Year)

Pune, Maharashtra
2024 – 2028

PROJECTS

MedTrack – Cloud-Enabled Healthcare Management System

Python, Flask, AWS DynamoDB, AWS SNS

- Built a full-stack Flask web application connecting patients and doctors, with dedicated dashboards and role-based access control (RBAC) enforced on every route
- Designed a DynamoDB data model for patients, doctors, appointments, and diagnosis reports, documented with an entity-relationship diagram
- Implemented appointment booking and diagnosis-report workflows with real-time notifications via AWS SNS
- Secured authentication using hashed passwords (Werkzeug) and environment-based configuration for all secrets

GeoAttend – Smart Attendance App

Android Studio, Java/Kotlin, OpenCV, Google Geofencing API

- Built a full-featured Android attendance app combining real-time facial recognition and GPS-based geofencing to eliminate proxy attendance
- Integrated the Google Geofencing API to restrict attendance marking to a defined campus boundary, ensuring location authenticity
- Implemented OpenCV-powered face recognition to verify student identity before logging attendance, achieving reliable biometric authentication
- Designed an intuitive admin dashboard for managing students, viewing attendance logs, and configuring geofence zones

AI Recipe Generator

Python, Streamlit, Google Gemini API, Pandas

- Developed an interactive web app that generates personalised recipes by leveraging Google Gemini's large language model API
- Designed a clean Streamlit UI allowing users to input available ingredients, dietary preferences, and cuisine type for tailored suggestions
- Used Pandas for ingredient data management and Matplotlib/Seaborn to display nutritional breakdowns visually
- Deployed as a lightweight single-page application with real-time API responses and formatted recipe output

Reel-Count-App

Flutter, Android Accessibility Service, Chrome Extension

- Built a cross-platform tool to track Instagram Reels and YouTube Shorts consumption across devices
- Developed a Flutter mobile app using the Android Accessibility Service to automatically detect and count reels/shorts watched
- Built a companion Chrome extension to track reels/shorts watched on the web, syncing usage data across platforms

Bank Management System

C, File I/O, Data Structures

- Implemented a console-based banking system in C covering account creation, deposits, withdrawals, and balance enquiry
- Used file I/O for persistent data storage and applied structured programming principles for modularity and maintainability

TECHNICAL SKILLS

Languages: Python, C++, Java, C, SQL, HTML, CSS, Javascript

ML / Data Science Libraries: NumPy, Pandas, Matplotlib, Seaborn, OpenCV, Streamlit

Tools & Platforms: Android Studio, Gemini API, Git & GitHub, VS Code, Linux, AWS (DynamoDB, SNS)

RELEVANT COURSEWORK & KNOWLEDGE AREAS

Data Structures & Algorithms • Object-Oriented Programming • Operating Systems • Database Management Systems • Computer Networks • Machine Learning (self-study) • Computer Vision (self-study)

COMPETITIVE PROGRAMMING

LeetCode: leetcode.com/u/uzzfxF7qcm — Actively solving DSA problems across arrays, strings, dynamic programming, and graph algorithms.

Open to internships and collaborative ML / Data Science projects. All projects available on GitHub.
